

Climate Change Scavenger Hunt

You are an environmental inspector for the National Park Service. Your task is to inspect the Florissant Fossil Beds National Monument visitor center and make sure the park is taking steps to reduce its carbon footprint. Answer the questions and draw sketches in the blank boxes below.

1. Where are the solar panels installed? What is their purpose?

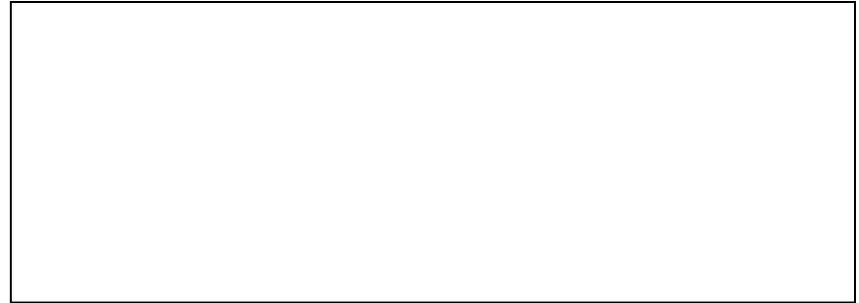

2. Where do you see LED (light-emitting diode) bulbs installed? Why might they be better than other types of light bulbs?

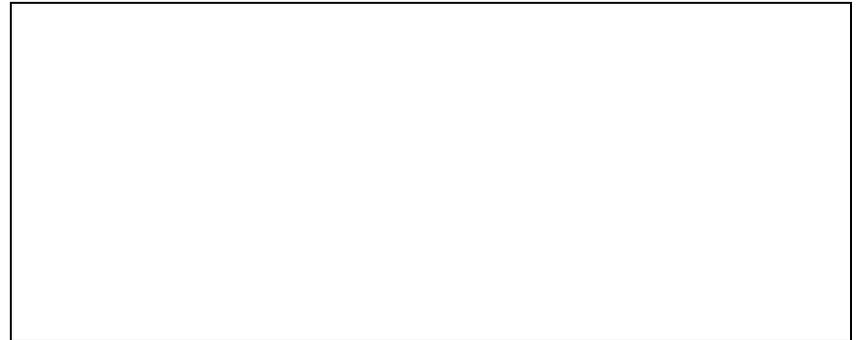

3. What are solar plate collectors used for? Where are they located in the visitor center?

4. Where do you see skylights in the visitor center? How do they contribute to making this an energy-efficient building?

5. Where is the solar furnace located? What is its purpose?

6. Why are multi-layered windows helpful? Where do you see this in the visitor center?
